

PACHARA WONGSASRI

Full Stack Developer

(+66) 99-009-4187 • mrpacharawongsasri@gmail.com • linkedin.com/in/pachara-wongsasri-9256103bb • github.com/Pachara2332 • Nakornpanom, TH • Open to relocation & remote

PROFILE

Full Stack Developer with hands-on experience building AI-powered applications and scalable web/mobile systems — including RAG pipelines, LLM integrations (Google Gemini, Claude), vector databases (ChromaDB), real-time WebSocket architectures, and IoT dashboards. Proficient in React, Next.js, Node.js, TypeScript, and PostgreSQL. Actively uses AI coding tools (Cursor, Claude Code, GitHub Copilot) throughout the development lifecycle.

Portfolio: portfolio-three-delta-scjek3jdc2.vercel.app/#projects

TECHNICAL SKILLS

AI / LLM	Gemini API, Claude API, RAG, ChromaDB, Prompt Engineering
Frontend/Mobile	React, Next.js, Angular, Flutter, React Native, JavaScript, TypeScript, Tailwind CSS
Backend	Node.js, Express.js, .NET, Go, PHP
Database	PostgreSQL, MySQL, Firebase, Supabase
Tools & ORM	Prisma, Git, Postman, Figma, Docker, ChromaDB
AI Dev Tools	Cursor, Claude Code, GitHub Copilot, Codex — used actively in production workflow

WORK EXPERIENCE

Full-Stack Developer Intern Dec 2025 – May 2026

Bussing Transit Co., Ltd. | React · Next.js · Node.js · TypeScript · Prisma ORM · LINE LIFF

- Built a full-stack LINE LIFF and Web Application for a bus transit business — covering an end-to-end Digital Bus Card flow with seat selection, online payment via Payment Gateway, LINE Login, Email Login, and JWT-based session management with token refresh.
- Developed an internal Operations Dashboard featuring real-time Live Map, Camera Feed, and passenger activity tracking — enabling faster decision-making and reducing cross-team coordination overhead.
- Designed RESTful APIs for core business logic (bookings, ticket status, transactions), modeled relational schemas with Prisma ORM, and handled Payment Webhook callbacks for real-time status updates.
- Wrote Python scripts on Linux to automate a video recording pipeline for onboard cameras — including scheduled recording, file segmentation, and automated data sync, reducing manual effort for the Operations team.

SELECTED PROJECTS

Enterprise Knowledge Platform — AI-Powered SaaS 2026

Next.js 16 · TypeScript · PostgreSQL · ChromaDB · Docker · NextAuth.js v5 · Google Gemini

- Built an Enterprise AI SaaS platform with multi-tenant workspace management, OAuth via NextAuth.js v5, and a RAG pipeline using ChromaDB — supporting PDF/TXT ingestion, Gemini embedding, and semantic search.
- Engineered a multi-provider AI failover chain (Gemini → Together → Cerebras) with Redis Token Bucket rate limiting and BullMQ background workers for document ingestion.
- Deployed full stack via Docker Compose with healthchecks; implemented JWT/bcrypt auth with token usage tracking per session.

Eleven Lineup — Premier League Lineup Builder 2026

Next.js 15 · React 19 · TypeScript · PostgreSQL · Prisma · JWT

- Built an interactive drag-and-drop pitch UI with @dnd-kit, JWT auth in HTTP-only cookies, and RBAC via Next.js Edge Middleware.
- Integrated external Football APIs with normalized local fallbacks, community features (posts, comments, likes), and a streak-based quiz mini-game for retention.
- Designed a normalized PostgreSQL schema separating football master data from user-generated activity across lineup, community, and game features.

Noir Cinema Booking — Mobile App 2026

Expo SDK 56 · React Native · Expo Router · TypeScript · Supabase

- Built a full cinema booking mobile app with Supabase Auth persistent sessions, protected routes via Expo Router, and GPS-based cinema sorting using Expo Location.
- Implemented real-time seat availability using Supabase Realtime subscriptions and Supabase RLS to enforce per-user access to bookings and profiles.
- Designed a normalized schema separating catalog data (movies, cinemas) from transactional data (showtimes, seats, bookings) with a native maps integration and web fallback.

EDUCATION

Mahasarakham University Graduated 2026

Bachelor of Science in Computer Science, Faculty of Informatics
